Vacuum Defender

The **Vacuum Defender** is recommended for restoration work, and has been designed for removing potentially damaging debris from the insulation before it comes in contact with the vacuum fan blades. This innovative design reduces the wear and tear on the vacuum fan blades, engine and the vacuum housing. The **Vacuum Defender** helps prolong the life of your vacuum.

- Abrasion Resistant (AR) Deflector Plate
- Removable drawer for quick and easy disposal of debris
- Design allows for debris emptying while vacuum is in use
- 6" inlet and outlet for maximum production
- Lightweight (60 lbs) all welded design
- Wheels for easy maneuverability *

Recommended optional purchase:

- Reducer Kits that allow use of 4" hose *

NOTE: All visible larger objects & debris should always be removed first before vacuuming - utilize the GV Defender as a preventative process step.
