## KRENDL WIRELESS LL REMOTE\*

\* long-life, long range

**EARN \$50 KRENDL BUCKS  
WITH EVERY  
REMOTE PURCHASE\*\***

\*\*available on the first 50 remotes purchased before November 30, 2017, will not apply to purchase price

This NEW KRENDL WIRELESS LL REMOTE\* is durable, with a long life and allows your crews to work on any project without interruption. With our 800'-1000' line of site range, this rugged remote allows your crew to start and stop equipment with a touch of a button. Our hand-held LED transmitter hosts a LED relay showing strength of battery power. Adding to its long life is a long-range of transmission; meaning this remote can be "user ready" for weeks at a time before needing to be charged. The KRENDL LL REMOTE is weatherproof and with its sturdy durability makes it "construction site strong", so no worries about dropping or getting stepped on.

It's a professional Contractor's choice and differentiates the KRENDL LL WIRELESS REMOTE from the competition:

- Available in 12 VDC, 24 VAC and CE certified for use in worldwide applications.
- Transmitter enclosure is rated to 50g's with a pin-screw connector to eliminate plug pullout, the transmitter rejects interference/crosstalk, and includes 1 USB wall charger
- Weatherproof fully potted receiver and the molded construction helps protect against shocking
- LED display/indicates the battery life and linked status at a glance
- Steel belt clip mounted on transmitter
- Rechargeable lithium battery with up to 40+ hours of button time per charge
- Retrofit kit available on all Krendl models\*

\* NOTE: Contact Krendl for availability of adaptor kits that work on other manufacturers' equipment

## KRENDL WIRELESS LL REMOTE

### AVAILABLE POWER

12 VOLT, 24 VOLT

### PRODUCT DESIGN

- High impact rated glass filled nylon material
- Lithium ion battery with USB wall charger
- Threaded spin-on connector eliminated loss of power to receiver
- Urethane-potted module
- Ergonomic hand-held design
- Extremely rugged, impact resistant

### TRIAL FEEDBACK FROM ON-JOBSITE TESTING\*

\*testing in the field for over 12 months

Alex-Installer, OH: "impressed with the lithium ion battery.....after we finally had to charge, it lasted up to 6 weeks between charging intervals! NO MORE putting batteries in and out.....just plug in a USB wall charger and done"

Austin- Crew Leader for Residential Insulation: "my crew has used other wireless units and they prefer this remote's design...they like the steel belt clip and outer rubber protector.....the size of the pendant is more installer friendly and compact during install applications. The fact they don't have to spend time popping batteries in and out, and the range.....makes this their remote of choice"

Jose' - Installer, CA: "very nice, good reception wherever the project or where on the job. Has lasted longer than multiple other remotes put together"

Shawn- Krendl Technical Service Lead: job is to test all wireless remotes and take all technical calls "this remote, by far has better transmission capabilities. When putting it through my QC checks, it has functioned down the road over "1000'" and through three block walls at 250' away.....I'll be taking ALOT less technical calls on this one"
